ANIKET KUMAR

DevOps Engineer | Azure | AKS | Terraform | CI/CD | Docker | Kubernetes
+91-7250427165 | aniketkmr484@gmail.com | Bengaluru, India (Open to Relocate) | Medium

SUMMARY

DevOps Engineer with 2 years of experience running cloud delivery for an Industrial IoT platform serving a UK-based refinery client. Automated releases across Dev, QA and Staging through **6+ pipelines**, standardized **Azure** environments with reusable **Terraform** modules, and built security checks and monitoring into the delivery process so misconfigurations and failures surface early. Experienced in troubleshooting **Kubernetes (AKS)** deployments and working across development, QA and operations teams.

TECHNICAL SKILLS

- **Azure:** AKS, VMs, VNets, Key Vault, Application Gateway, Azure Firewall, Bastion, NSG
- **Infrastructure as Code:** Terraform, remote state management
- **CI/CD & GitOps:** Azure DevOps Pipelines, GitHub Actions, Argo CD
- **Containers & Orchestration:** Docker, Kubernetes, AKS, Helm
- **Security & DevSecOps:** Trivy, Checkov, TFLint, tfsec
- **Monitoring & Observability:** Prometheus, Grafana
- **Scripting & Automation:** Python, Bash, Shell Scripting
- **Operating Systems & Version Control:** Linux, Git, GitHub
- **AWS (project-based):** VPC, EC2, ALB, IAM, S3, DynamoDB, NAT Gateway

EXPERIENCE

DevOps Engineer | DevOps Insiders *Nov 2024 - Present*

Industrial IoT monitoring application for a UK-based refinery client

- **Built and maintained 6+ CI/CD pipelines** on Azure DevOps and GitHub Actions, automating build, test and deployment across Dev, QA and Staging.
- Provisioned Azure infrastructure (VNets, VMs, Storage Accounts, Azure SQL) using reusable **Terraform** modules with remote state for consistent environments.
- Added **4 automated checks** (fmt/validate, TFLint, tfsec, Checkov) to CI/CD to catch infrastructure misconfigurations before deployment.
- Deployed containerized services on **AKS** with **Docker** and **Helm**; fixed pod failures like CrashLoopBackOff using kubectl logs/describe.
- Built **Prometheus** and **Grafana** dashboards for application, pod and infrastructure health.
- Configured Application Gateway, Internal Load Balancer and Key Vault for traffic routing and secrets management.

DevOps Engineer | Freelance *Jul 2026 - Aug 2026*

Airflow Observability Pipeline - *Freelance Project*

Tech Stack: Docker Compose, Apache Airflow, PostgreSQL, StatsD, Prometheus, Grafana

- Delivered a single-node **Apache Airflow** setup on **Docker Compose** (8 services), migrating from CeleryExecutor + Redis to LocalExecutor + PostgreSQL, with health checks and service dependencies.
- Built Airflow-to-**Grafana** monitoring (StatsD, StatsD Exporter, Prometheus, 15s scrape) and verified ~129 airflow_* scheduler, executor and task metrics.

PROJECTS

GitOps CI/CD Pipeline on Kubernetes - *Personal Project*

Tech Stack: GitHub Actions, Docker, Trivy, Helm, Argo CD, Kubernetes (Kind), Prometheus, OpenTelemetry, Jaeger

GitHub: gitops-ci-pipeline | gitops-kubernetes-config

- Built a two-repository **GitOps CI/CD** pipeline (**Docker** image build, security scan, GHCR push, Helm, **Argo CD**) with 6 automated stages and zero manual kubectl commands.
- Gated every image with a **Trivy** CRITICAL vulnerability scan before registry push as a DevSecOps check in the **GitHub Actions** pipeline.

- Configured **Argo CD** (2 Applications: app + observability) on **Kubernetes** (Kind) with self-healing, pruning, and Git-based rollback via git revert, with no separate rollback tooling.
- Instrumented the FastAPI service with OpenTelemetry and Jaeger, and deployed **Prometheus** to scrape Jaeger metrics every 15 seconds for monitoring.

Azure Hub-and-Spoke Network Foundation *- Personal Project*

Tech Stack: Azure (Firewall, Bastion, NSG, Key Vault), Terraform, GitHub Actions

GitHub: azure-network-foundation-terraform

- Built a Hub-and-Spoke network on Azure using **Terraform** with Azure Firewall, Bastion, NSGs, routing, and Key Vault RBAC.
- Created reusable Terraform modules for Dev and Prod environments, with a GitHub Actions workflow for Terraform validation.

AWS Landing Zone - Terraform Infrastructure Project *- Personal Project*

Tech Stack: AWS (VPC, EC2, ALB, IAM, S3, DynamoDB, NAT Gateway), Terraform, GitHub Actions

GitHub: aws-terraform-landing-zone-project

- Built a multi-AZ AWS network with **Terraform**: VPC across 2 AZs, ALB routing to EC2 in private subnets, NAT Gateway, and least-privilege IAM roles and Security Groups.
- Configured remote state in S3 with DynamoDB locking and a GitHub Actions pipeline running fmt, validate and plan on every pull request.

EDUCATION

- Bachelor of Computer Applications (BCA), Chandigarh Group of Colleges, Mohali - 2021 to 2024 - CGPA: 7.63/10
